

About us

Established as a privately owned independent company in 1987, Teepee Materials Handling Limited have built a reputation as being one of the UK's leading providers of storage equipment and office refurbishment specialists.

From its wealth of experience, Teepee can offer support from the initial design stage of a project including advising on current statutory regulations and standards through to equipment selection and implementation, offering a single point of contact "from concept to completion".

Environmentally aware and Health and Safety conscious our team of estimators, project and site managers all work closely with our clients to ensure their objectives have been fully considered, met and successfully installed within an agreed timely, affordable manner.

The philosophy of our success in providing solutions for every environment is not only to meet the expectations of our clients, but to exceed them.

Turnkey Solutions

From a single bay of racking or shelving through to a million pound refurbishment project, you can trust Teepee to provide the right solutions for every environment.

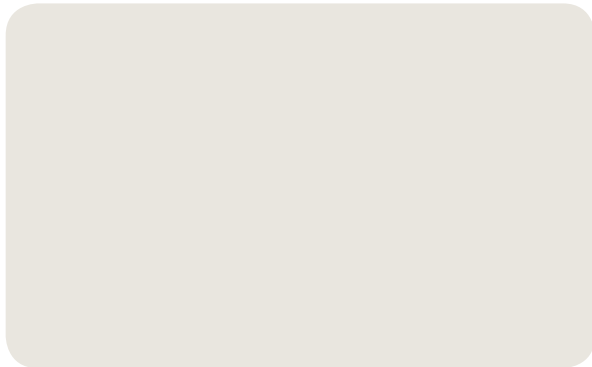

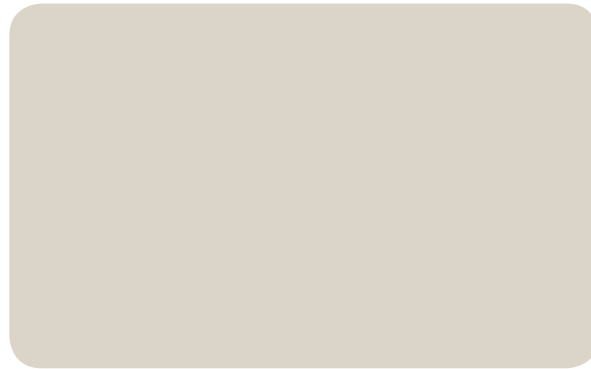

Working closely with our clients Teepee can provide Turnkey solutions including civil works, mechanical and electrical equipment, fire prevention systems, security, storage equipment, material's handling equipment, project management – on and off site, ensuring full compliance with building control/CDM regulations.

We pride ourselves in offering a comprehensive and detailed analysis in resolving problems, taking in to account creativity in design and extensive range of equipment to enable us to provide our clients with cost-effective solutions to meet ever increasing business demands.

Our highly motivated/experienced staff are available for discussion throughout every aspect of a project, typical phases of a successful project include:

- Initial consultation, discussions, design and proposals
- Client acceptance and order placement
- Site mobilisation, equipment delivery & installation
- Equipment commissioning & handover, including all relevant documentation/certification

trust Teepee to
provide the right
solutions for every
environment

Mezzanine Floors

Mezzanine floors are used extensively in today's businesses, for industrial, commercial and retail environments to maximise the use of existing floor space and headroom – inside or out. From a single level floor, to multi floor levels, mezzanines are ideal for storage, offices, production or as retail floors and are all a bespoke design to suit the application. The modular construction minimises any disruption on site during the installation period thus ensuring our clients business is not affected.

All our mezzanine floors are designed and built to meet your requirements and in accordance with current statutory regulations and can offer the following benefits:

- Increased available floor space – up to 100%
- Utilises available free headroom, releasing ground floor space
- Fully demountable – allowing fast efficient installation/relocation

In addition to the mezzanine floor structure, we can advise and supply/install above or below the floor all ancillary equipment i.e. partitions, sprinklers, lighting, ceilings, fire cladding, heating and ventilation, decorative balustrade, etc.

built to meet your
requirements

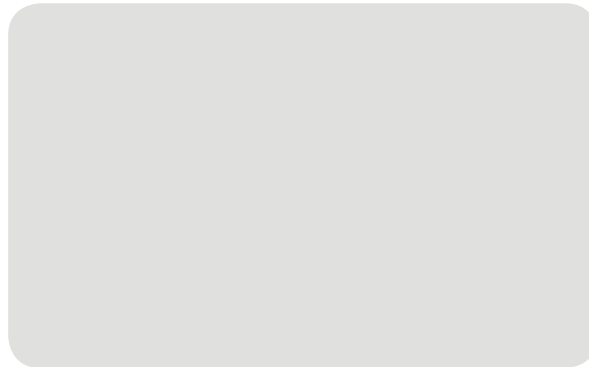

Interiors

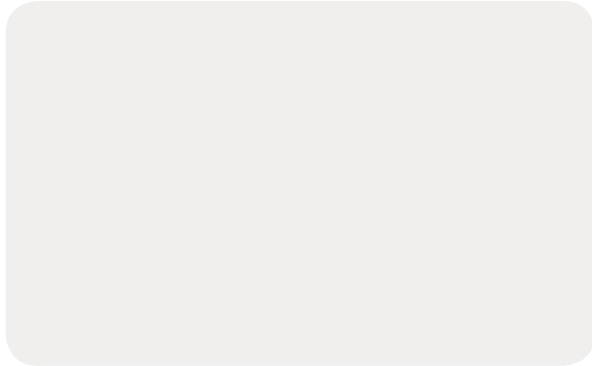

Achieving a creative and functional working environment, our experienced designers provide optimum use of space on all projects, incorporating your company ethos to maximise the potential of all interiors. We understand that all our customers are different and we believe it's essential to work with our clients in partnership to achieve the right solution.

From offices to board rooms, welfare facilities to commercial retail refurbishments, we have the knowledge and expertise to successfully implement a working environment you can be proud of.

To ensure all contracts run smoothly to an agreed schedule, our in-house project team co-ordinate all site operations to ensure minimum disruption to your operation while simultaneously ensuring compliance with statutory regulations i.e. building control/CDM.

environment

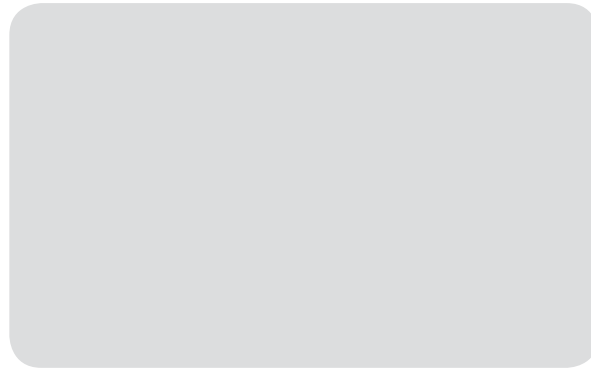

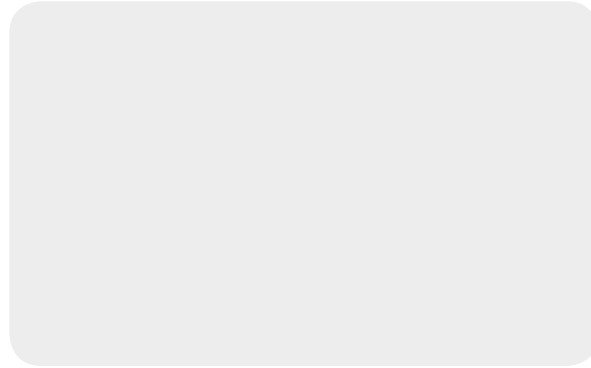

Partitions

For offices, warehouses, clean rooms or retail environments we can design, supply and install partitions taking in to consideration aesthetic, acoustic and fire resistance properties to meet your specific criteria. Partitioning is a versatile cost effective system designed to create pleasant yet functional work spaces and can be constructed in numerous ways:

- **Single skin, steel** - ideal for creating low cost, practical working areas
- **Double skin, steel or composite** for general office use
- **Stud** for larger walls needed to segregate different working areas
- **Steel mesh** for secure compounds offering clear visibility into and out of the working areas

Partitions are available in a range of colours and panel designs, ranging from all solid to single and double glazed panels, fitted with integral blinds and complemented by an attractive range of wall coverings and doors.

partitioning is
a versatile cost
effective system

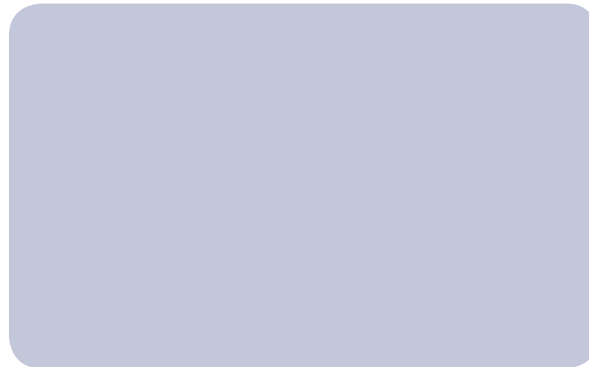

Pallet Racking

Used extensively for the storage of palletised goods within warehouses, available in numerous configurations:

- **Wide aisle pallet racking** used with conventional lift trucks for most applications
- **Narrow aisle pallet racking** for additional storage capacity used with bespoke lift trucks
- **Drive in racking** most efficient use of space with first in – last out stock rotation
- **Push back racking** again first in – last out stock rotation but with the added advantage of being able to load/unload individual levels
- **Double deep pallet racking** used with bespoke lift trucks able to load one pallet behind another
- **Mobile pallet racking** essentially a racking structure which moves along on floor mounted rails

Teepee pallet racking is designed, supplied and installed in accordance with SEMA /FEM codes of practice.

available in
numerous
configurations

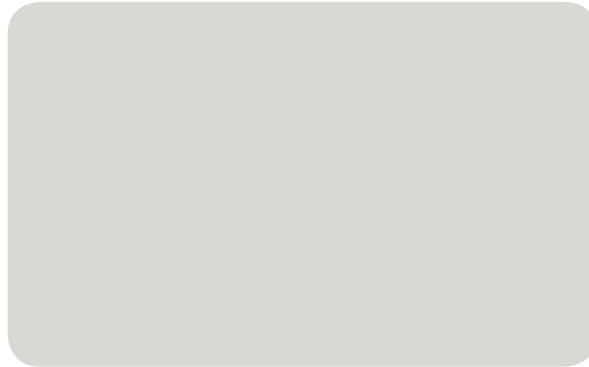

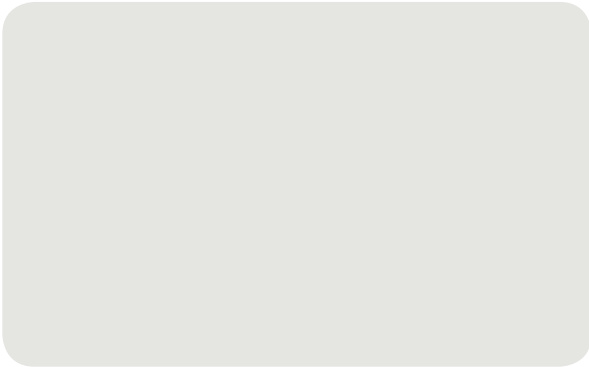

Cantilever Racking

Bespoke design ideally suited to accommodate long awkward products such as timber, steel tubes or sheets, moulded extrusions etc. The support arms can be bolted on, adjustable in the height or welded in to position and can be designed to carry weights up to 5000kg. Benefits include:

- Increased storage capacity
- Complete accessibility
- Products easily identified

ideally suited
to accommodate
long awkward
products

Shelving

Shelving systems are an extremely versatile, cost effective storage medium, ideal for industrial, retail and commercial environments, accommodating various types of products ranging from small to large bulky items. All systems are accompanied with a varying range of accessories i.e. shelf dividers, drawers, doors etc and can be configured to suit different applications.

Systems available include:

- **Boltless** a simple, easy to assemble “bolt - free” structure ideal for storing small part items
- **Longspan** for the slightly larger items not suitable for the boltless system
- **Archive** designed to accommodate standard archive document storage boxes
- **Mobile** ideal for areas where access or space is limited

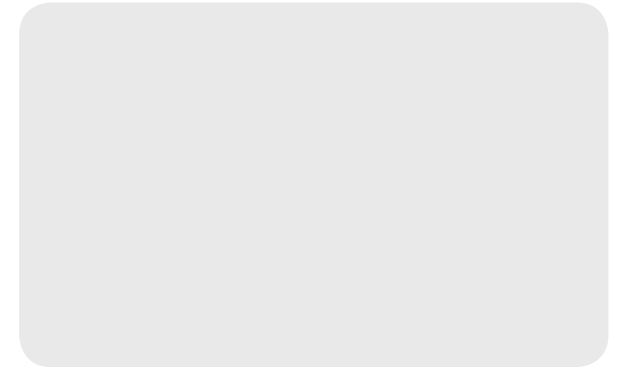

All shelving systems offer the following benefits:

- Easily adjustable
- Clear, precise product identification
- Complete accessibility
- Increased storage capacity
- Modular construction allowing quick efficient installation/relocation and reconfiguration.

ideal for
industrial, retail
and commercial
environments

Live storage

Live storage design can be varied to suit the application and environment. This storage concept offers high density storage with rapid stock rotation on a first in-first out (FIFO) basis. Goods are supported on steel or plastic rollers, the type and number of wheels or rollers, their pitch and load capacity in each lane, can all be varied to suit the load. Benefits include:

- Continuous flow of stock on first in-first out principle
- Store and handle high volume rapid turnover stock
- Provides line-side just-in-time materials provision
- Tilted shelves - ease of access for stock picking

Conveyors

We offer a wide range of conveyor systems from gravity to fully automated, carton to pallet handling. Standard modules are used throughout each system “bolted together” to create complete solutions.

- **Powered & gravity roller** conveyors – used extensively for handling cartons/totes
- **Belt conveyors** – for handling small or uneven based items and lifting/lowering between levels
- **Pallet conveyors** – chain and rollers for loads up to and in excess of 1000kg

We can provide a complete conveyor control system which integrates fully with your existing warehouse management system (WMS) or alternatively it can form part of a stand alone system with continuous data exchange. Systems can be designed to ensure full traceability of production and sortation sequences in a simple user friendly manner.
